THE following pages contain a few illustrations of our Interlocking Rubber Tiling, showing range of colors and its possibilities in the way of design.

The advantages claimed for Interlocking Rubber Tiling over other forms of tiles and floor coverings are as follows:

It is noiseless, non-slippery, waterproof, thoroughly sanitary and so durable as to last practically a life time without requiring repairs. It may be laid directly upon existing floor, whether of wood, cement, stone or iron, therefore saving the expense of constructing a concrete floor which is absolutely necessary in all other kinds of tiling.

As this material generally does not require to be laid in cement, the work of laying may be accomplished during business hours without interruption.

For banking-rooms, corridors of public buildings, steamships, yachts, railroad cars, hospitals, billiard-rooms, kitchens, pantries, bath-rooms, vestibules, etc., it is especially desirable.

We will gladly furnish samples and further data upon application.

UPPER-DECK LANDING
STEAMSHIP VADERLAND
RED STAR LINE

For steamships, yachts, etc., it is especially and peculiarly adapted. It stands the strain and racking without separating or coming up, and its non-slippery feature is of highest value.

UPPER-DECK LANDLNG
STEAMSHIP A'DERLAND
RED STAR LINE

It is capable of being designed into harmonious color combinations in keeping with any surroundings. Beautiful effects both in tile and carpet designs may be made.
